

OSYP Labour Rates & Working Policy

At Ocean Strider Yacht Projects, we provide specialist marine systems engineering, diagnostics, fabrication, and technical support to the highest professional standard.

Primary Areas of Work

OSYP specialises in marine electrical and onboard systems:

- Electrical diagnostics and fault finding (AC/DC)
- Lithium batteries, charging, and power management
- Inverters, shore power, and distribution systems
- Solar, wind, alternators, and DC-DC charging
- Electric propulsion systems
- System upgrades and rewires
- Equipment installation and commissioning

OSYP Labour Policy

Every yacht is custom built. Every installation is different. Every fault is unique. For this reason, Ocean Strider Yacht Projects does not provide fixed quotations for technical work. Even as work begins, it is almost impossible to accurately assess access to equipment, previous workmanship or modifications, hidden faults, installation constraints, and the true time required to complete the task correctly. Quoting in this environment requires guesswork. We do not guess with your boat or your money.

How We Work

We charge a clear, transparent hourly rate for the time required to diagnose, design, and complete the work properly. This ensures:

- No guesswork
- No shortcuts
- No surprises
- Work is completed to proper engineering standards, not to fit an estimate

Standard Labour Rate

USD \$85 per hour

Charging Structure

- Travel time is chargeable and is included on your invoice.
- Parts and materials are charged separately.

We don't guess. We diagnose, design, and fix properly.
